

CANNABIS/SPICE VAPES

There has been an emerging trend in the use of vapes containing THC and Spice being used by children in schools across South East London.

- **THC** (a psychoactive found in cannabis) or **Spice** (a synthetic cannabinoid) is either added to the vape liquid or the vape coil. Either method presents a clear danger as it is difficult to control the dose.
- As a result, **overdosing is highly likely**. There have been a couple of incidents of young people being hospitalised following the use of vapes.
- Intel suggest that **BLUE** and **GREEN** vape juice could be THC, while **RED** and **ORANGE** is likely to be Spice.

What to do if you find a vape, which you suspect contains cannabis or spice.

- Please seize any relevant items, ensuring that basic fact finding has been completed; WHO, WHEN, WHERE, HOW it was found, this will enable the police to assess.
